DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Election/Restrictions

Applicant's election without traverse of claims 1-12 in the reply filed on 12/22/2009 is acknowledged.

Claim Objections

Claim 3 is objected to because of the following informalities: "adsorbed" should be "absorbed". Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, and 4-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Tamura (US 2005/0093455).

Regarding claim 1, Tamura discloses a vacuum tube (figures 1-3) having a reduced-pressure vessel (2) containing at least a discharge gas sealed for electric discharge, said vacuum tube characterized in that the sum total of the number of organic gas molecules, the number of water molecules, and the

Art Unit: 2889

number of oxygen molecules remaining inside said reduced-pressure vessel is smaller than the number of molecules of said discharge gas (paragraph 61).

Regarding claim 2, Tamura discloses a ratio of said number of molecules of said discharge gas to the sum total of said number of organic gas molecules and said number of water molecules is not smaller than ten times (paragraph 61, not higher than 100 ppm is less than 10,000 times).

Regarding claims 4-10, the examiner notes that the preamble recites intended use of the structure disclosed by Tamura as in claim 1. MPEP 2111.02.

Regarding claim 11, Tamura discloses a gas selected from Ar, Kr, or Xe (paragraph 29).

Regarding claim 12, Tamura discloses the vessel is made of silicon oxide as a main component (paragraph 29, "quartz glass").

Claims 3 is rejected under 35 U.S.C. 102(b) as being anticipated by Katase (US 6,362,565).

Regarding claim 3, Katase discloses a vacuum tube (figures 1-3) having a reduced-pressure vessel containing at least a discharge gas sealed for electric discharge, said vacuum tube characterized in that the number of water molecules adsorbed on an inner wall of said reduced-pressure vessel is not greater than 1×10^{16} molecules/cm² (column 5, line 47 – column 6, line 3, 1 ppm of water content with 30 mm inside diameter).
